Venice Parsley Booking Application - Backend Admin Guide

Overview

This guide provides comprehensive instructions for administrators managing the Venice Parsley booking platform. The admin interface allows full control over apartments, bookings, users, content, and system settings.

Accessing Admin Panel

Login Requirements

- **URL**: `/admin`
- **Required Role**: `administrator` or `admin`
- **Authentication**: Supabase authentication with role-based access

First-Time Setup

1. **Before deploying**, run the auto-admin trigger in Supabase SQL Editor:

   ```
   CREATE OR REPLACE FUNCTION public.handle_new_admin()
   RETURNS TRIGGER AS $$
   BEGIN
     IF LOWER(NEW.email) = LOWER('your-admin-email@example.com') THEN
       UPDATE public.profiles SET role = 'admin', updated_at = NOW() WHERE id =
   NEW.id;
     END IF;
     RETURN NEW;
   END;
   $$ LANGUAGE plpgsql SECURITY DEFINER;

   DROP TRIGGER IF EXISTS auto_admin_on_signup ON public.profiles;
   CREATE TRIGGER auto_admin_on_signup AFTER INSERT ON public.profiles
     FOR EACH ROW EXECUTE FUNCTION public.handle_new_admin();
   ```

   Replace `your-admin-email@example.com` with your actual admin email.

2. Register a user account through the frontend using that email — role is automatically set to `admin`

3. Log in at `/admin-login` and access `/admin`

> **Note**: The login URL is `/admin-login` (not `/admin/login`) to avoid redirect loop conflicts.

Screenshot Description: Admin login page with email/password fields, styled consistently with the main application.

Dashboard Overview

Main Dashboard (`/admin`)

Key Metrics:

- Total apartments listed
- Active bookings this month
- Total registered users
- Revenue statistics

Quick Actions:

- Add new apartment
- View recent bookings
- Manage users
- Edit content

Screenshot Description: Dashboard grid with metric cards, recent activity feed, and navigation menu to different admin sections.

Navigation Structure

- **Apartments**: Manage property listings
- **Bookings**: View and manage reservations
- **Users**: User account management
- **Content**: CMS for website content
- **Menu**: Navigation menu configuration
- **Settings**: System-wide configuration

Apartment Management

Viewing Apartments (`/admin/apartments`)

List View Features:

- Sortable table with key information
- Search by apartment name or location
- Filter by status (active/inactive)
- Bulk actions for multiple apartments

Columns:

- Name, Location, Price/Night, Status, Stripe Link, Actions

Screenshot Description: Data table with apartment rows, search bar, filter dropdowns, and action buttons (edit, delete, view).

Adding New Apartments (`/admin/apartments/new`)

Required Fields:

- **Basic Info**: Name, slug, description, location
- **Pricing**: Price per night, minimum stay, currency

- **Images**: Multiple high-resolution photos (recommended 10+ images)
- **Amenities**: Checkbox list of available features
- **Stripe Integration**: Payment Link URL from Stripe dashboard

Advanced Settings:

- Maximum guests
- Square meters
- Floor number
- Special notes

Screenshot Description: Multi-tab form with file upload for images, rich text editor for description, and Stripe URL input field.

Editing Apartments (`/admin/apartments/[id]/edit`)

Same form as creation with pre-filled data

Additional Features:

- Image management (reorder, delete, add new)
- Booking calendar integration
- Performance metrics (views, bookings)

Stripe Payment Link Configuration

1. **Create Payment Link in Stripe**:
    - Go to Stripe Dashboard > Payment Links
    - Set amount, currency, description
    - Configure success/failure URLs
    - Copy the generated URL
2. **Update Apartment**:
    - Paste URL in `stripe_payment_link_url` field
    - Test the link to ensure it works
    - Update pricing if changed

Screenshot Description: Stripe dashboard showing Payment Link creation interface, with URL copy button.

Booking Management

Calendar View (`/admin/bookings`)

Features:

- Monthly calendar display
- Color-coded bookings by status
- Hover for booking details
- Click to edit booking

Status Types:

- `confirmed`: Payment successful
- `pending`: Awaiting payment
- `cancelled`: Booking cancelled
- `completed`: Stay finished

Screenshot Description: Full calendar grid with date cells containing booking summaries, legend for status colors.

Booking List View (`/admin/bookings/list`)

Detailed List:

- Sort by date, status, guest name
- Search functionality
- Export to CSV
- Bulk status updates

Columns:

- Booking ID, Guest Name, Apartment, Check-in/Check-out, Status, Total Amount, Actions

Screenshot Description: Comprehensive table with booking details, status badges, and action dropdowns.

Managing Individual Bookings (`/admin/bookings/[id]`)

Booking Details:

- Guest information and contact details
- Apartment details
- Payment information
- Special requests
- Booking timeline

Actions Available:

- Update status
- Send confirmation email
- Cancel booking
- Add internal notes
- Contact guest

Screenshot Description: Detailed booking view with tabbed interface for information, timeline, and actions.

User Management

User List (`/admin/users`)

Features:

- View all registered users

- Filter by role (guest, member, admin)
- Search by name or email
- Role management

User Roles:

- `guest`: Default user role
- `member`: Verified user with benefits
- `admin`: Administrative access
- `administrator`: Full system access

Screenshot Description: User management table with role badges, registration dates, and action buttons.

User Profile Management

View/Edit User Details:

- Personal information
- Booking history
- Loyalty points balance
- Role assignment

Actions:

- Change user role
- Reset password (send reset email)
- View user's bookings
- Deactivate account

Content Management System (CMS)

Content Sections (`/admin/content`)

Available Sections:

- Homepage hero content
- About page content
- Contact information
- Terms and conditions
- Privacy policy

Features:

- Rich text editor (supports formatting, images, links)
- Draft/Published status
- Version history
- Multi-language support

Screenshot Description: CMS interface with content section selector, WYSIWYG editor, and publish controls.

Menu Management (`/admin/menu`)

Navigation Configuration:

- Add/edit menu items
- Nested menu structure
- External/internal links
- Language-specific menus

Screenshot Description: Drag-and-drop menu builder with item properties panel.

System Settings

General Settings (`/admin/settings`)

Configurable Options:

- Site title and description
- Contact information
- Default currency
- Booking policies
- Email templates

Screenshot Description: Settings form with categorized sections and save/reset buttons.

Email Configuration

Templates Available:

- Booking confirmation
- Payment success/failure
- Contact form notifications
- Admin alerts

Variables Support: Dynamic content insertion (guest name, booking details, etc.)

Monitoring and Analytics

System Health

Database Monitoring:

- Connection status
- Query performance
- Storage usage

External Services:

- Stripe webhook status
- Email delivery rates
- Supabase service status

Booking Analytics

Key Metrics:

- Occupancy rates by apartment
- Revenue by month/quarter
- Popular booking periods
- Guest demographics

Reports:

- Export booking data
- Generate financial reports
- User activity logs

Security and Permissions

Role-Based Access Control

Administrator Permissions:

- Full system access
- User management
- System configuration

Admin Permissions:

- Apartment and booking management
- Content editing
- Limited user management

Data Protection

Backup Procedures:

- Regular database backups via Supabase
- File storage backups
- Configuration exports

Security Measures:

- HTTPS enforcement
- Input validation and sanitization
- SQL injection prevention via parameterized queries
- XSS protection

Troubleshooting

Common Admin Issues

1. Cannot Access Admin Panel

- Verify user role in database
- Clear browser cache

- Check authentication status

2. Payment Link Issues

- Confirm URL is correct and active in Stripe
- Test link independently
- Check webhook logs

3. Content Not Updating

- Check publish status
- Clear application cache
- Verify database connection

4. User Role Changes Not Applying

- Refresh user session
- Check database for role updates
- Verify RLS policies

Maintenance Tasks

Regular Tasks:

- Update apartment availability
- Process booking cancellations
- Review user reports
- Monitor system performance

Monthly Tasks:

- Generate financial reports
- Update content and pricing
- Review user feedback
- Backup system data

API and Integration

Webhook Management

Stripe Webhooks:

- Monitor webhook delivery
- Handle failed deliveries
- Test webhook endpoints

Configuration:

- Webhook URL: `/api/stripe/webhook`
- Secret: Environment variable `STRIPE_WEBHOOK_SECRET`

Email Integration

Resend Configuration:

- API key validation
- Delivery monitoring
- Template testing

Best Practices

Content Management

- Use high-quality, consistent images
- Keep descriptions engaging and informative
- Regularly update pricing and availability
- Maintain consistent branding

Customer Service

- Respond to inquiries within 24 hours
- Keep detailed booking notes
- Follow up on completed stays
- Handle cancellations professionally

System Maintenance

- Monitor error logs regularly
- Keep dependencies updated
- Test new features in staging environment
- Maintain comprehensive backups

Support and Resources

Documentation Links

- Supabase documentation for database management
- Stripe documentation for payment processing
- Next.js documentation for application updates

Emergency Contacts

- Development team for technical issues
- Hosting provider for infrastructure problems
- Payment processor support

Training Resources

- Video tutorials for new admin users
- Knowledge base articles
- Best practices guide

Future Enhancements

Planned Features

- Advanced analytics dashboard
- Automated email campaigns
- Mobile admin application
- API for third-party integrations
- Advanced reporting tools BACKEND_ADMIN_GUIDE.md
